

South Korean Animals

South Korea is a country in
Asia. South Korea has many cool
animals. There are three types of
animals I researched. The animals
are the Siberian tiger, the Peppie
Emper butterfly, and the musk deer.

Name _____

The Purple Emperor butterfly has blue
on one wing. And the Emperor butterfly
sticks its sucker in the dirt to find
food. The sun makes the wing brown.

Name _____

The musk deer has fangs and it

eats tree branches. The musk deer

has oil on its back side and rubs

The oil on trees to make the female

deer follow them. The musk deer

can mark his left over food come back

up so he can digest it better.

Name _____

Date _____

The Siberian tiger eats wolf hogs and

other big animals, and they can

get 19 feet and get to 600 pounds.

There are probably only 400 or 600 Siberian
tigers left in the world.
